IAN OTIENO

STUDENT

👤 Male | 📅 8th April, 2003 | 📍 Kenya, Mombasa, Mombasa

My name is Ochieng Ian Magus Otieno, but I go by **Magus**. I'm a third-year student at Maasai Mara University pursuing a BSc in Mathematics and Information Technology. I'm passionate about tech, self-improvement, and lifelong learning. I specialize in Python, R, SQL, and Linux-based tools for penetration testing and reverse engineering. I'm currently diving deeper into full-stack development, animation with Blender, and Bash scripting as I work toward mastering the Linux environment. Outside the classroom, I've worked in hospitality, where I progressed from part-time waiter to manager, sharpening my leadership and interpersonal skills. I also tutor high school students, helping them understand complex topics in math and science. I believe in the power of knowledge-sharing and mentorship. I'm the current chess captain at my university, a dedicated gamer aiming to go pro in FPS titles like Combat Master, and an aspiring content creator on TikTok where I share original short stories. I'm learning how to monetize my storytelling and build a personal brand online. I use platforms like Allison to supplement my formal education with global certifications in tech, business, and personal development. My goal is to become a leader in Africa's tech space—developing solutions, mentoring youth, and eventually founding my own esports team. I'm driven by curiosity, discipline, and a strong desire to leave a positive mark. Every course I take, project I build, or skill I master brings me one step closer to that vision.
